
(a)
Demixing free energy (eV/atom)
$x_{Cr}$
Muffin-tin approximation
GGA (this work)
Experimental
PWSCF-PAW
SIESTA-NC
GGA (QE, this work)
(b)
unstable: curvature > 0 (shaded)
$\partial^2 \Delta G / \partial x_{Cr}^2$ (eV/atom)
$x_{Cr}$
quadratic fit to two-point values
two-point differences
exact (PWSCF-PAW model)
three-point differences
(c)
Fully decomposed MD structures ($\phi$ = 1), $25^3$ bcc cells, outer faces: two phases form inside the spinodal window
